

Absorbents and Spills Online Training Program

Our E-Learning Programs are **FREE** to all CIRMA members.

Course Description:

Spills and leaks occur every day in all types of facilities. Fortunately, most are very small. Many of these spills, however, involve hazardous wastes that must be cleaned up correctly. It's important that everyone in the facility know how to correctly clean up small and large spills - and do so safely.

In this course, the learner will be exposed to best practices for preventing spills in the work area, gain insight on how to deal with a spill and finally, gain knowledge as to why floor drains are rapidly becoming extinct and what best practices are related to floor drains and spilled fluids.

Time: Approximately 30 minutes [Preview the Absorbents and Spills online training program here.](#)

Learning Objectives:

- Describe best practices on preventing spills in the work area.
- Describe how to deal with a spill.
- Explain why floor drains are rapidly becoming extinct.
- Describe best practices related to floor drains and spilled fluids.

Key Topics Include:

- Spills
- Used Absorbents are Usually Hazardous Waste
- Absorbent Containers - Properly Marked
- Guidance for Controlling Used Absorbents
- Sample Labeling
- General Handling of a Large Spill
- Notifications on Larger Spills and Violations
- Oil Spills and Antifreeze Spills
- Four Tips for Handling Small to Medium Spills
- Preventing Spills
- Secondary Containment
- Floor Drains
- Never Down the Drain
- Tracking the Waste Stream to the Source
- Floor Wash
- Oil and Water Separators
