SUBJECT: NSA Cybersecurity Advisory – Patch Remote Desktop Services on Legacy Versions of Windows® – TLP: WHITE

The National Security Agency is urging Microsoft Windows administrators and users to ensure they are using a patched and updated system in the face of growing threats. Recent warnings by Microsoft stressed the importance of installing patches to address a vulnerability in older versions of Windows. Microsoft has warned that this flaw is potentially “wormable,” meaning it could spread without user interaction across the internet. We have seen devastating computer worms inflict damage on unpatched systems with wide-ranging impact, and are seeking to motivate increased protections against this flaw. Additional information is available in the links below - NSA Cybersecurity Advisory and MS-ISAC RDP Primer.
